Rhododendron Princess Alice

Short Description

Compact shrub with deep green glossy leaves. Flowers white. Highly scented. Possibly a sport of *R. fragrantissima*. 1.5m

More Information

Parentage: *R. ciliatum* x *R. edgeworthii*

Breeder: Veitch- First Class Certificate (FCC) 1865

R. Princess Alice is commonly thought to be a sport of *R. fragrantissima* which may or may not be true. The flowers look identical, the flower fragrance is much the same, the leaves also look the same. As a plant however *R. fragrantissima* has an open form whereas *R. Princess Alice* has a much tighter form. If a choice is made between the

Rhododendron Princess Alice

two clones then R. Princess Alice is the preferred option. The parentage of R. fragrantissima is also thought to be different listed as R. formosum x R. edgeworthii which also gained an FCC in 1868. It is also possible the two clones are a grex - i.e. originate from 2 seed from the same seed pod.

Cultivation

The number one requirement to grow good Rhododendrons is quality top soil. Avoid clay and sand like soils.

When planting dig a hole wider than seems necessary so the soil will be soft and friable around the root ball. The roots of Rhododendrons are like fine filaments and will struggle in solid hard packed ground. For this reason, Rhododendrons planted in a lawn area may struggle especially in a dry season. After planting water in well to settle in and to remove air pockets. It is a good idea to cover the soil surface around the plant with humus to retain moisture - though do not use lawn clippings.

After planting and one good watering it should not be necessary to do any more watering, except in drought like conditions. Do not water every day, and even worse, several times per day.

Rhododendrons can be susceptible to mites and a few other pests. For best results spray with an insecticide in spring to keep new growth clean and vibrant. An alternative to insecticide is to use summer oil, or even a bit of dish wash liquid well diluted in water. Apply using a sprayer, or even a watering can with a rosette.

After flowering is finished remove dead flower heads to tidy up the plant. While old flower heads will fall off by themselves over time, removing dead heads will improve the appearance.
